Applicant elected the invention wherein X is Coor1 and Y is -NR2R3 with traverse in paper no. 6. Applicant's remarks are noted but the other compounds which are separately classified (as set forth in paper no. 5) would support separate patent. Therefore, the restriction requirement is deemed proper and made final.

Claims 1-41 are being examined as they read on the elected invention as set forth above.

Applicant is herein required to reduce the scope of the instant claims to the elected invention.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Campbell et al reference (1996).

The Campbell et al reference states in AB lines 13-15 that "D-Met provided excellent otoprotection even at the lowest level with complete otoprotection obtained for the 300 mg/kg dosing as measured by both ABR and SEM," and in AB lines 8-10 that the "auditory brainstem response (ABR) thresholds were obtained in response to clicks, and 1KHS, 4KHS, 8KHS and 14 KHS toneburst stimuli before and 3 days after drug administration."

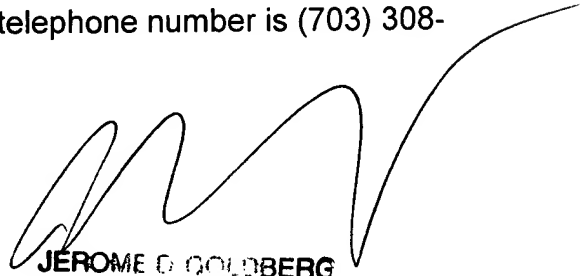

The only difference is that the ototoxicity is caused by other than noise. Therefore, one skilled in this art would find ample motivation from the prior art *supra* to use the claimed compounds to treat ototoxicity caused by any means including noise.
